### **Chemical Compatibility 072804**

In response to request for chemical compatibility sources, the following internet links provide very good compatibility charts for the majority of chemicals on the market today.

They will not have chemicals by brand name – i.e. Baker Petrolite corrosion inhibitor. You will need to contact your customer's chemical rep and have the sales rep contact the chemical engineer for his company. That engineer will have the compatibility information for that specific product. If he is unable to make that connection – contact Sidewinder Pumps with the customer's name, where the field is with the problem, the name of the chemical company and the full name of the chemical.
