

### Manufacturer Disclaimer

Sidewinder Pumps, Inc. recommends using 316 SS seamless tubing rated for the maximum discharge pressure of the specific pump model being used. DO NOT USE poly tubing, copper tubing, or seamed tubing as a discharge line. Use of incorrect material may result in discharge line failure leading to personal injury, death, and/or compromise to the injection objectives. For Safety Purposes and Good Engineering Practice, Sidewinder Pumps, Inc. recommends placement of a properly sized Pressure Relief Valve (PRV)/ Pressure Safety Valve (PSV) on the pump discharge line at the pump, with the relief line plumbed back to the chemical tank.
